

Data-Driven Modernization for Virginia's K-12 Systems

Commence helps school systems unify data, modernize operations, and build scalable frameworks that strengthen public education.

Powering the Next Generation of Connected Schools

Newport News Public Schools (NNPS) partnered with Commence to replace paper-based systems that slowed collaboration and decision-making. Across 42 schools and 4,600 employees, Commence delivered a district-wide modernization initiative that turned decades of static data into a connected, secure ecosystem.

- **Backfile Conversion:** 750 GB of legacy data migrated to a centralized, searchable repository
- **Platform Integration:** Unified access for HR and Finance with built-in compliance and security
- **Automated Workflows:** Streamlined document routing and record retrieval
- **System Interoperability:** Seamless integration with Tyler Munis applications

Smarter Systems. Stronger Schools.

Today, more than **5.5 million digitized records** power daily operations across NNPS.

“Commence helped us implement a digital document management strategy to increase productivity and reduce costs by digitizing our documents.”

– James Blizzard, Human Resources at NNPS

This transformation set a new operational standard for public education—where information flows freely and securely across every classroom, department, and decision.
