

One Platform for Medical Reviews, Program Integrity & Coding

The Commence Platform automates work across coding, medical review, and program integrity. It assembles the necessary information, applies the appropriate criteria, cites the evidence behind each result, and routes exceptions to the right expert.

Intelligence Built Into Every Capability

Policy by Review Period

Applies the clinical standards, coverage criteria, and policies in effect at the time of service.

Citable Results

Links findings directly to the source records and criteria that support them.

Expert Oversight

Advances routine work automatically while keeping clinical and operational experts involved where judgment is required.

Modular Design

Allows organizations to implement one capability or connect multiple capabilities across a larger workflow.

Proven in Complex Health Programs

Commence supports some of the nation's largest health programs with technology designed for accuracy, accountability, and scale.

40M+

beneficiaries supported

1.3M+

physician-reviewed cases

500K+

reviews

8M+

pages of medical records processed daily

Advancing Work Across Healthcare

Autonomous Medical Coding

Reads clinical documentation, assigns medical codes, and directs exceptions to coding professionals.

Autonomous Reviews

Evaluates medical evidence against clinical and coverage criteria to support consistent determinations.

Coding Audits

Identifies unsupported codes and diagnosis-related groups by comparing submitted coding with the medical record.

Eligibility Validation

Verifies coverage and program requirements using information gathered across relevant records.

Fraud, Waste & Abuse Detection

Surfaces outliers, billing anomalies, and emerging patterns across claims and medical records.

Appeals & Dispute Resolution

Organizes evidence, policy, and case history into a complete record for review and resolution.

Works Within Existing Environments

Commence connects with current healthcare systems through Fast Healthcare Interoperability Resources (FHIR), Health Level Seven (HL7), X12, application programming interfaces, portals, fax, and physical records.

Organizations can select a licensing and deployment model suited to their infrastructure and security requirements. The platform runs on Amazon Web Services and supports commercial and government cloud environments.
